CO1 - Assessment

1. House Price Prediction

Q. Heart disease Prediction

Machine Learning

Data Collection

Heart Stroke dataset from hospitals

BP

Food Habits

Glucose level

Stress / tension

Human personality and habits

Model training

Data Preprocessing

Cleaning (missing data / noise)

ML Algorithm

Multiple linear regression

BP / Glucose (Independent)

Habits (Independent)

Stroke Prediction

If bp / glucose is high with bad habits
High risk of stroke

else

Low risk of stroke

Recommendation system

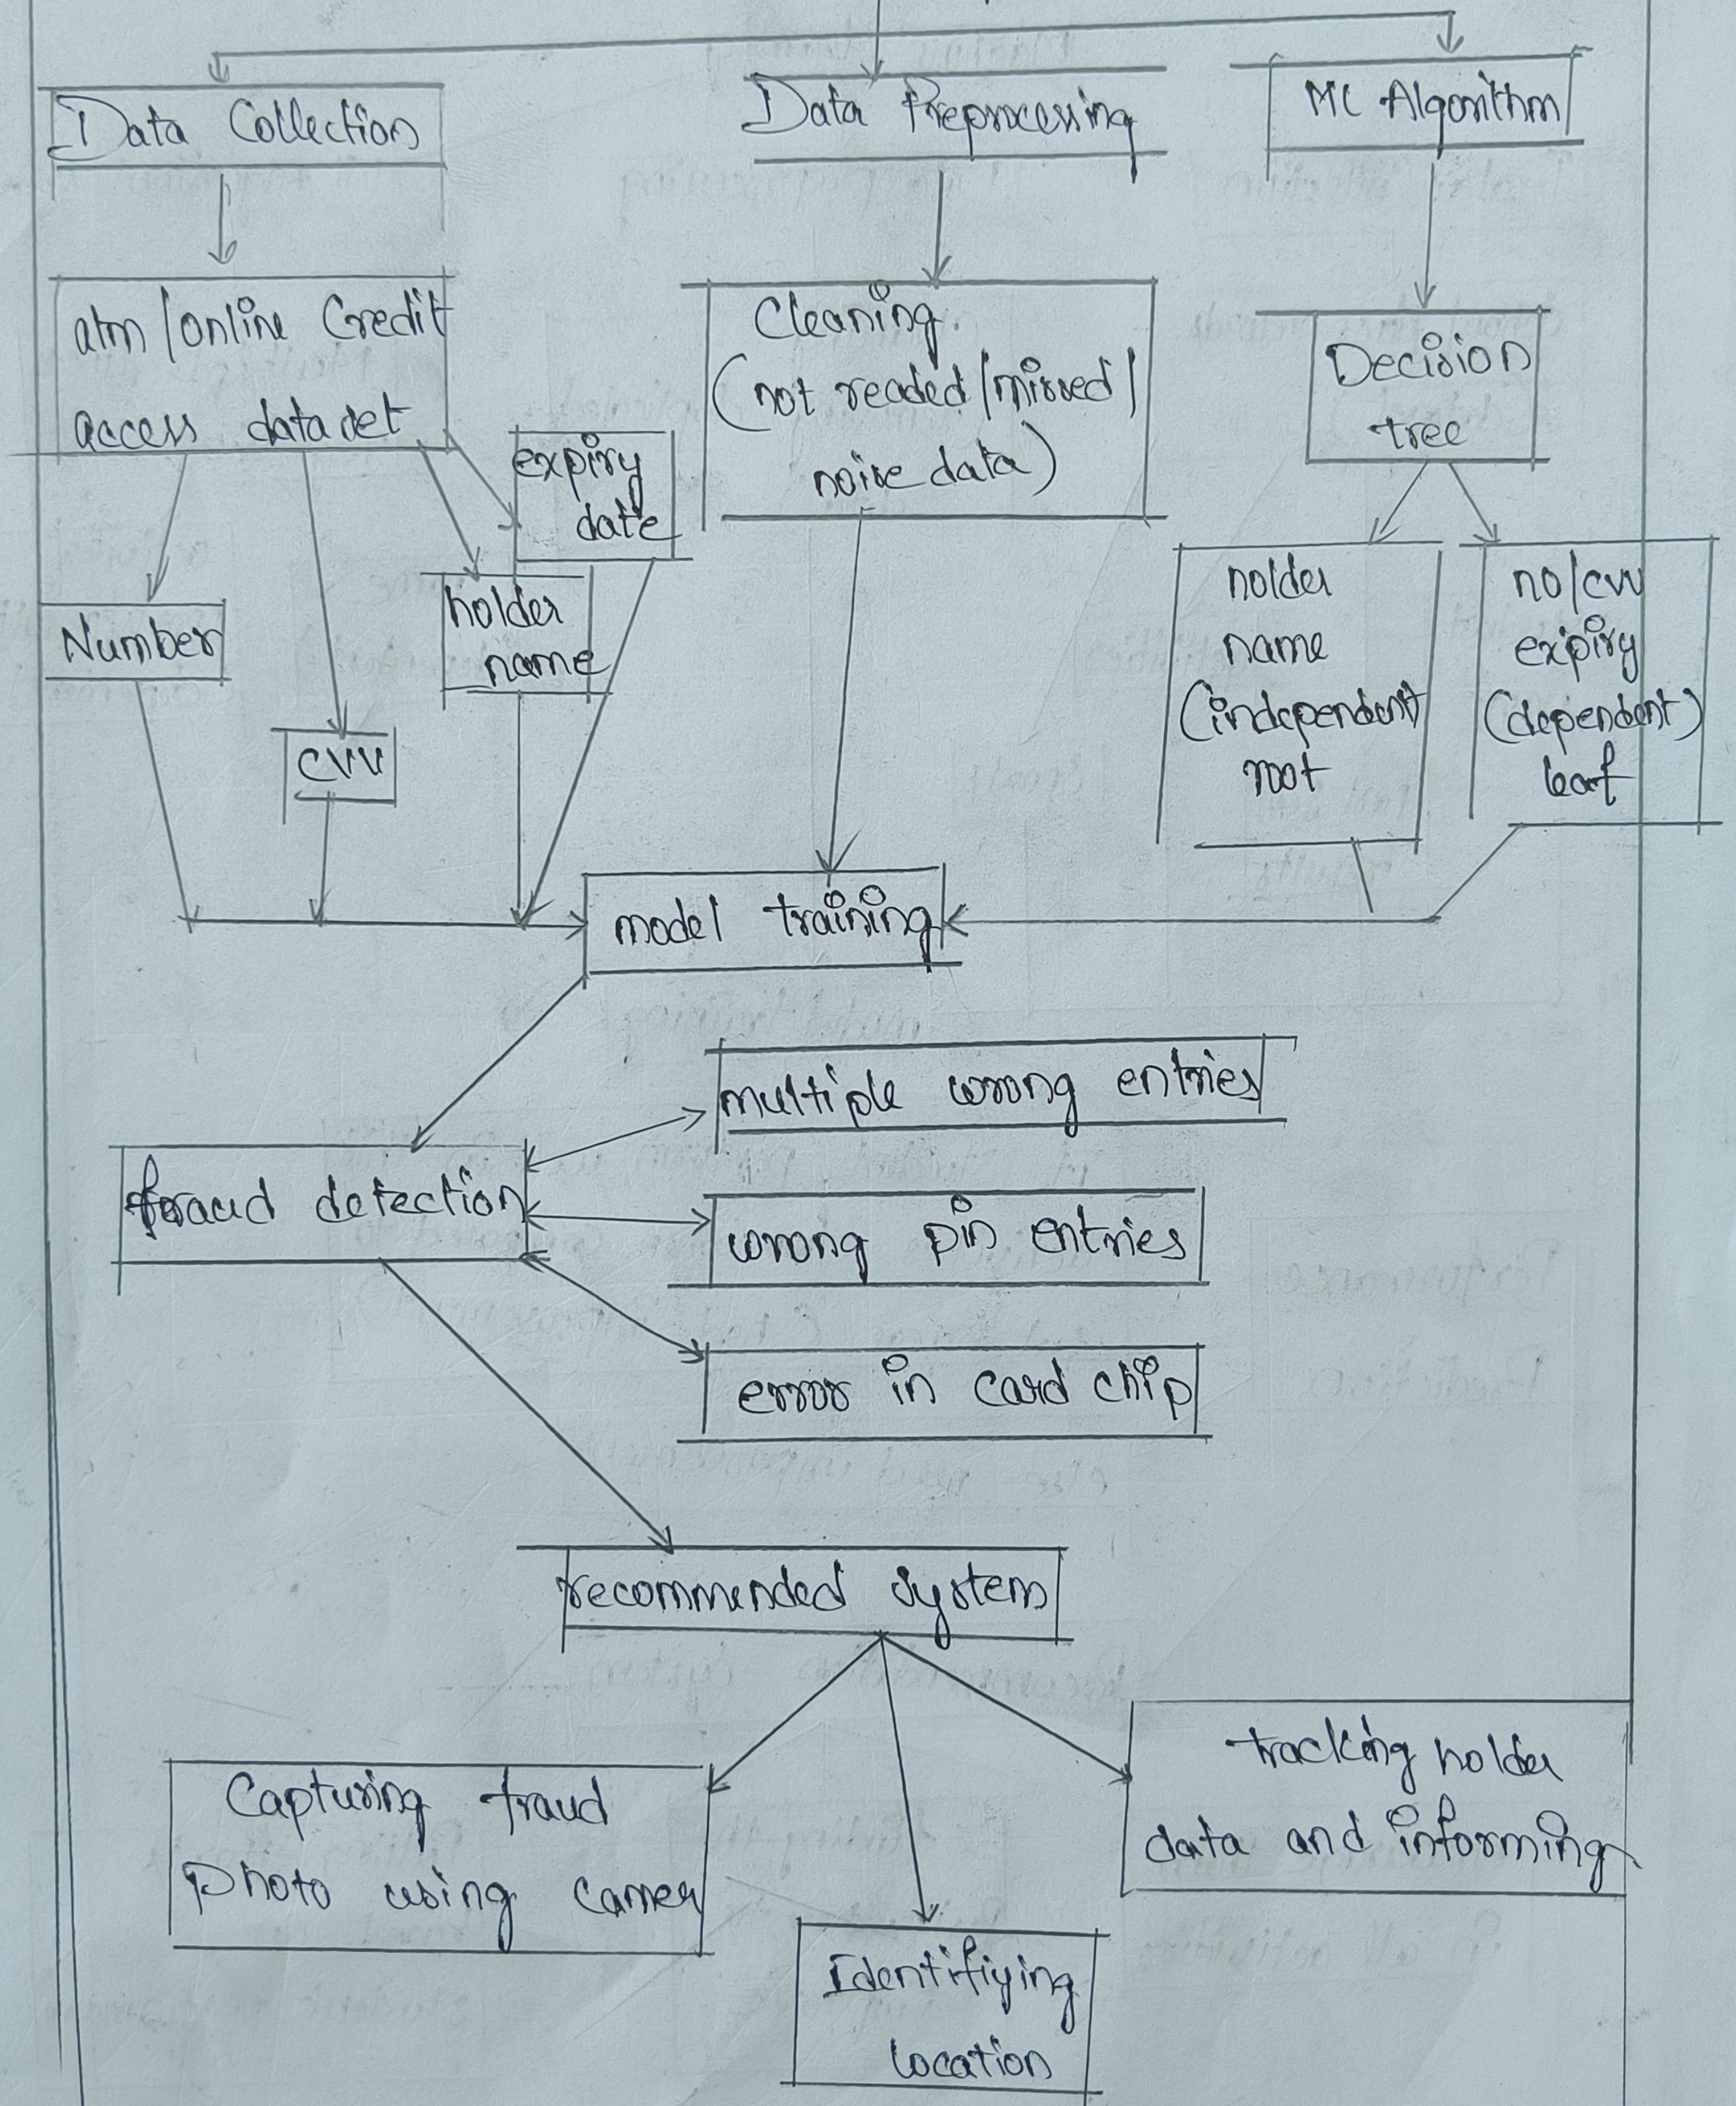

maintain Good food habits

maintain less Stress / tension

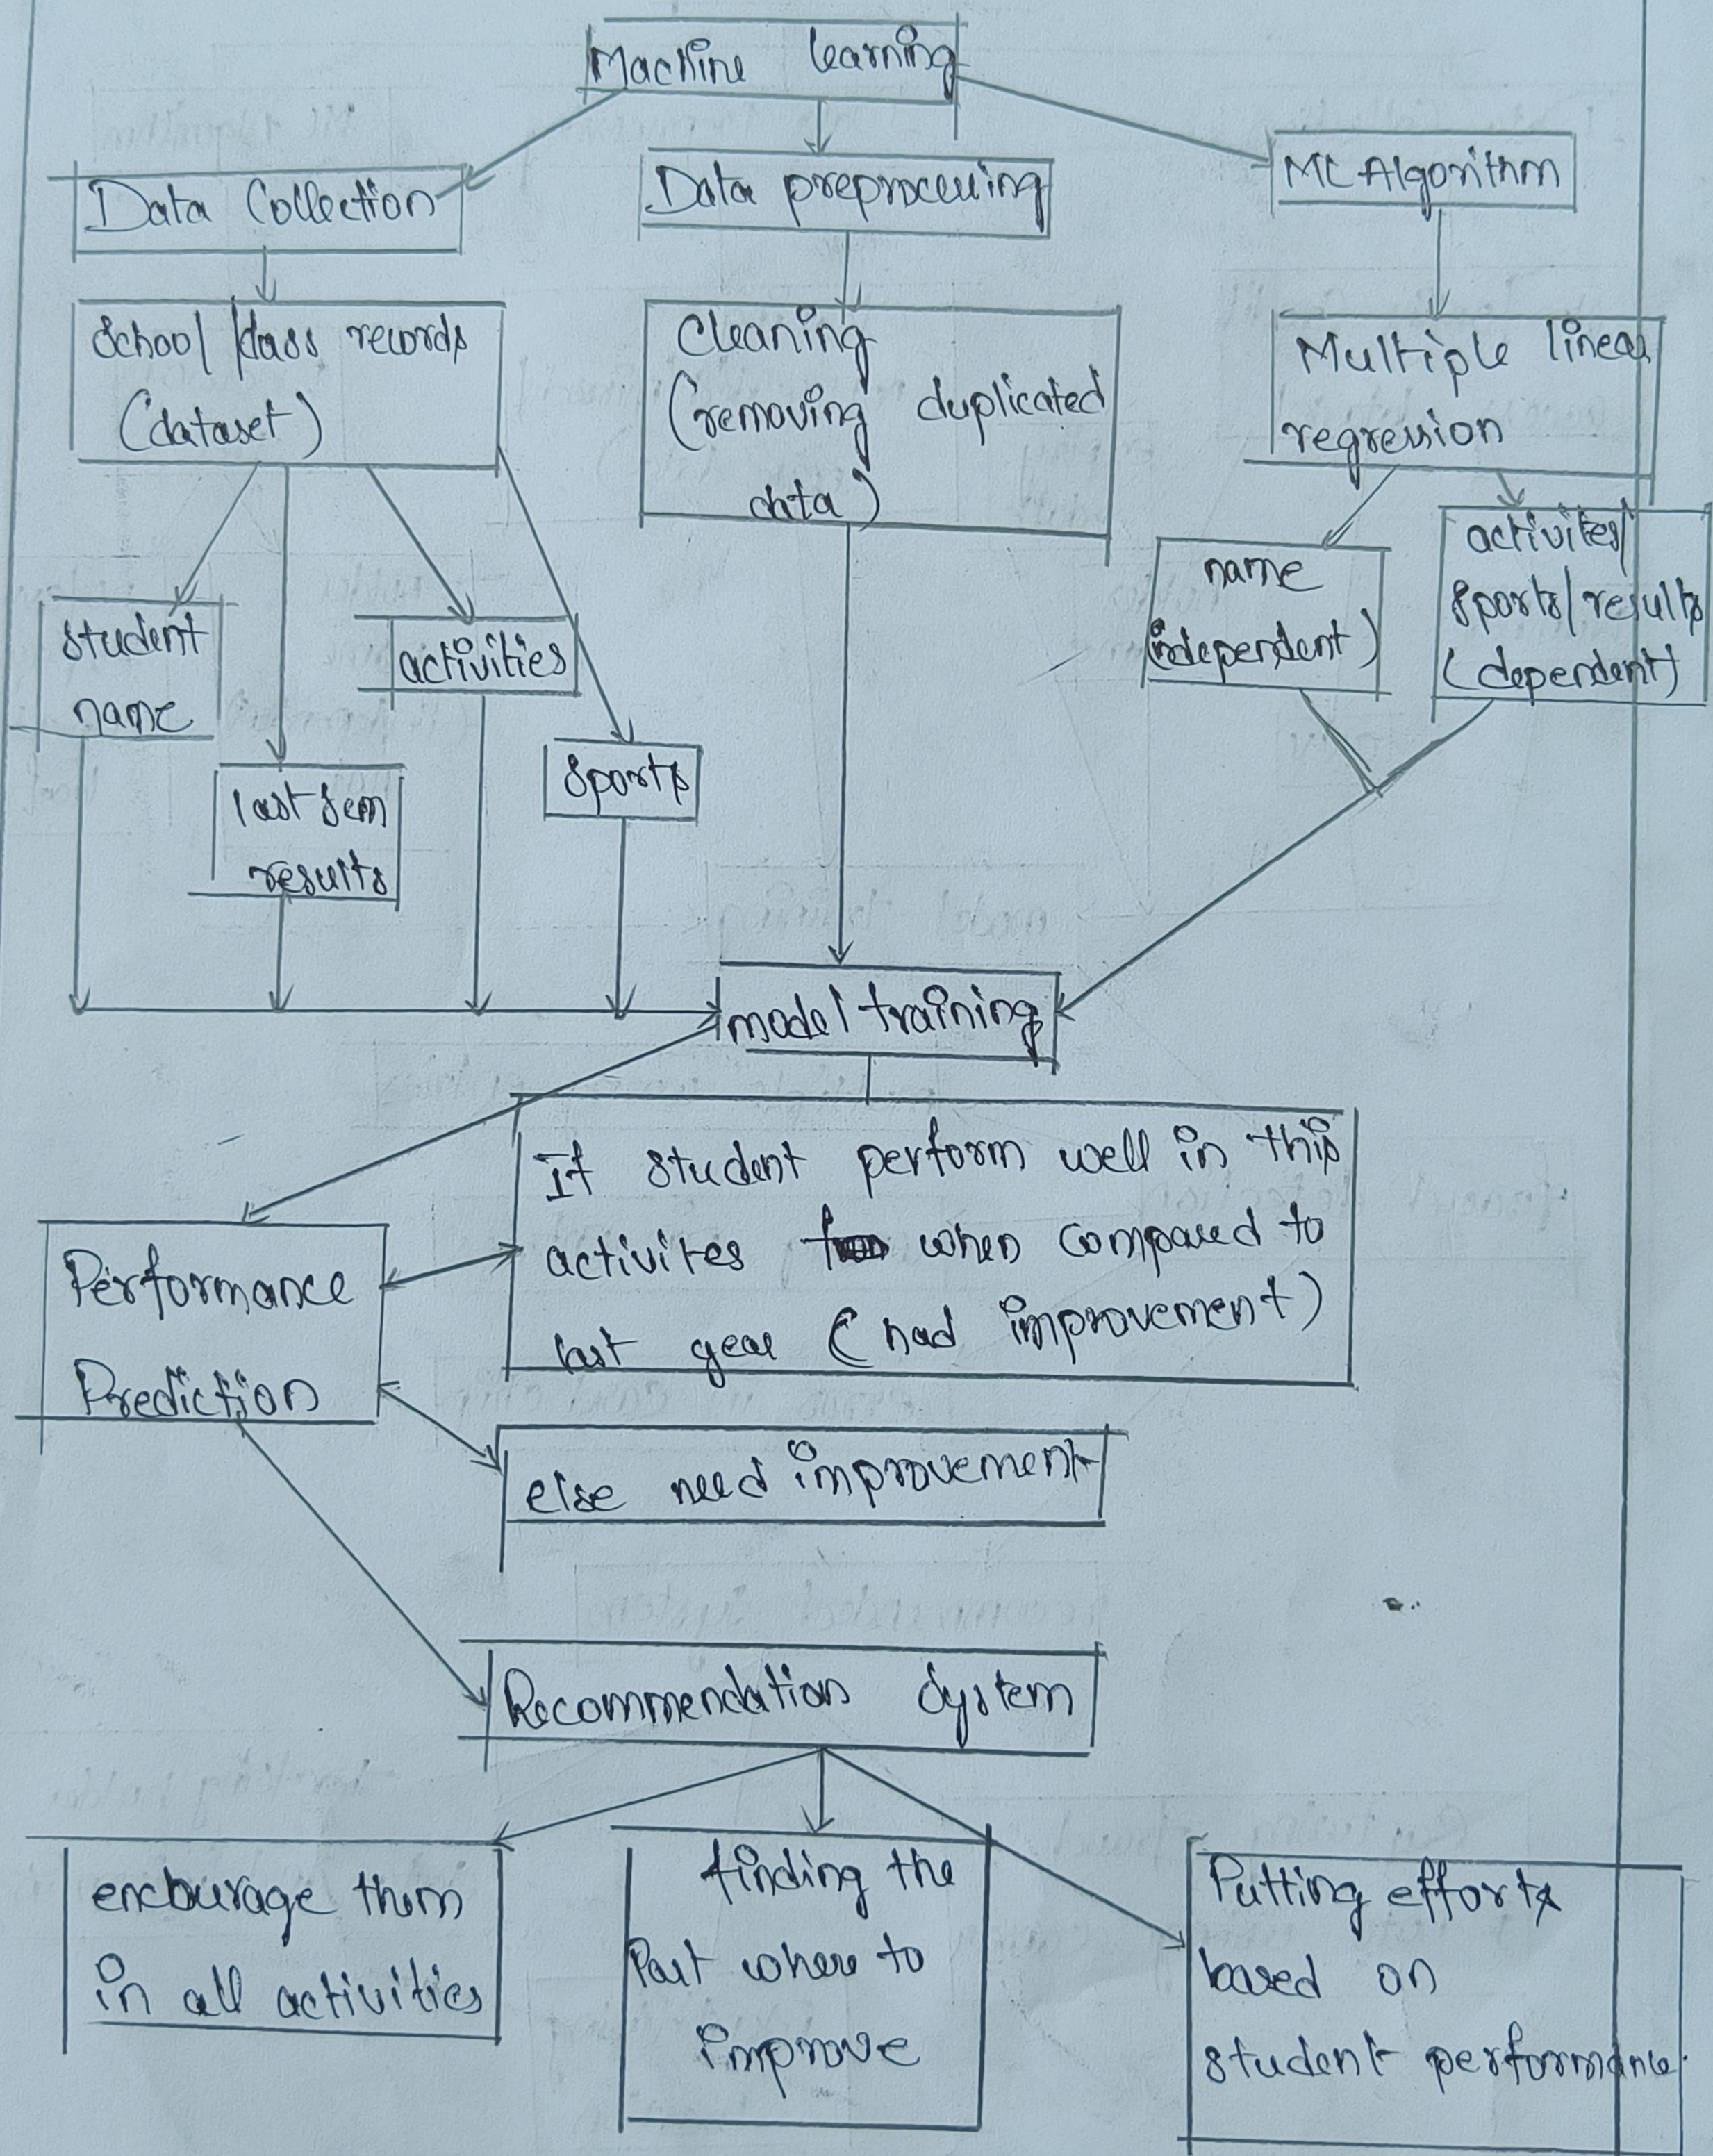

advising for prevention of alcohol / tobacco

3 Credit Card fraud detection

Machine learning

4. Student performance prediction

5 loan approval Prediction
